Economic Outlook

RANKING

COFACE CEE TOP 500 COMPANIES

August 2016

THE COFACE PUBLICATIONS

by Coface Central Europe

The year 2015 brought a good mix of conditions for Central and Eastern Europe. Average GDP growth for the CEE region was 3.3% in 2015, after 2.6% in 2014. Economies benefited from rising domestic demand. This included both, growing private consumption, supported by declining unemployment and growing wages, and increasing investments in most economies. Important support came from EU funds which CEE countries were efficient users of in the final year of validity of the 'old' EU budget. At the same time, CEE countries remained active exporters focusing on Eurozone enjoying a GDP growth of 1.6% and looking for new markets.

The CEE Top 500 ranks the 500 biggest companies in the region by turnover. These top players increased their turnover by 4.2% to nearly 593 billion EUR and enlarged their staff by 0.5%. Overall 4.3% of the total labor force in the region is employed by the companies of the CEE Top 500 which has a positive effect on unemployment rates. The ongoing upward trend was also recorded by the majority of the sectors in the CEE Top 500. Twelve out of thirteen sectors increased their turnover compared to the previous year. Strong rises were achieved by textiles, leather & clothing on +14.8% and automotive & transport on +10.3%. The only sector to see a decrease in its turnover was minerals, chemicals, petroleum, plastics & pharma on -8.3%.

Favorable business conditions extended into 2016. The forecast for the CEE region in 2016 is nearly on the same level as 2015 with an estimated average growth rate of 3.0%. A further improvement in the labor market and growing confidence will strengthen household consumption as the main growth driver of the CEE economies. The contribution of investments will not be as high as last year due to a slow start of new EU co-financed projects weakening the expansion of the construction sector and various other associated industries. On the external side CEE countries will remain active exporters, although the slowdown in global trade may hamper their ambitions.

FOR SAFER TRADE

A WORD

FROM THE EXECUTIVE
MANAGER CENTRAL
AND EASTERN EUROPE

KATARZYNA KOMPOWSKA

IN 2015, THE CEE REGION CONTINUES TO GROW AND CONFIRMS ITS HIGH POTENTIAL FOR BUSINESSES.

I am pleased to welcome you to the CEE Top 500 ranking, our annual publication on the biggest companies in our region. We have become a major source for businesses in CEE and have now published the analysis for the eighth year in a row.

This time, I'm glad to be able to affirm the optimistic picture which we saw last year. The year 2015 brought a good mix of conditions for the CEE region, which is reflected in our study of the Top 500 companies. CEE economies benefited from an improving and favorable economic environment. Exports profited from a slow but gradual recovery of its main trading destination - the Eurozone, especially Germany, while a strong contribution came from domestic demand. Companies reported solid economic growth rates as well as more structured growth last year. Nearly 70% of companies in the ranking are enjoying a rise in turnover compared to 62% of the previous year.

The positive picture is confirmed by the acceleration in the average regional GDP growth rate from 2.6% in 2014 to 3.3% in 2015, with the Czech Republic taking the lead with an increase of 4.5%. Moreover, last year's GDP result was the highest since the post-crisis level of 2009. The number of insolvencies decreased over the course of last year in nine out of 13 countries and the GDP-weighted regional insolvency average was -14%.

This year, we are including the Top 10 companies of Russia and Ukraine in our Coface outlook.

Focusing on 2016, we see that EU funding will not be as supportive as it was in 2015 as the new EU budget is used more gradually at its beginning. As such it will not contribute to growth as strongly as it did last year. Moreover, among existing external risks, such as the Chinese slowdown and its impact on Germany and the Eurozone as the main trading partner of the CEE region, there could be consequences of Brexit. These include not only weaker exports to the UK but also an overall decrease in sentiment across the whole of Europe.

In order to explore opportunities in the region, it is essential for companies to monitor developments in CEE on a regular basis. Ongoing analysis as well as market and economic expertise are therefore important conditions. The knowledge of our analysts and economists form the foundation of our studies, analysis and country assessments and is built on 70 years of experience. Today, Coface has the biggest geographical footprint in Central and Eastern Europe, and is helping companies in more than 200 countries around the world to mitigate their risk. We are also the number 1 provider of company information in CEE.

We invite you to read our latest study and to stay up to date on the Top 500 companies in Central and Eastern Europe.

CEE TOP 500

ANALYSIS

Solid growth in an exceptional favorable environment abounded for the largest businesses in Central and Eastern Europe in 2015. However, this wasn't the case for every company. Some of the largest struggled the most.

2015 - A BOOMING CEE ECONOMY

2015 was a good year for Central and Eastern Europe. The economy was booming and so were many of the 500 largest companies. All countries saw an increase in GDP ranging from a tender 0.7% in Serbia to a strong 4.5% in the Czech Republic. Average GDP growth accelerated from 2.6% in 2014 to 3.3% in 2015 which was the highest since the post-crisis level of 2009.

For the majority of countries, strengthened domestic demand was the main growth driver thanks to a booming economy that led to lower unemployment, rising wages, low inflation or even deflation in most countries. These good economic conditions were based on a number of developments. EU funding exceptionally boosted investments in 2015. It was the final year of access to the previous EU budget. As CEE economies are highly exposed to exports and the Eurozone is the premier foreign trading partner, its recovery - although weak - supported CEE exporters. Eurozone growth rose from 0.9% in 2014 to 1.6% in 2015. Insolvency figures clearly supported the upswing: The GDP-weighted average of insolvencies dropped by 14% in 2015.

The CEE Top 500 reflect the economic growth seen in the countries covered¹ in the ranking: Overall turnover rose by +4.2% to 593 billion EUR and net profits soared to 26.9 billion EUR (+73.7%). Nevertheless, companies are still cautious when it comes to hiring. 2,168,852 people worked at the largest companies in CEE (+10,335) which corresponds to a very slight increase of 0.5%. The only two countries in

recession were conflict-ridden Ukraine (-9.9%) and sanctioned Russia (-3.7%). Both countries are out of the scope of the CEE Top 500 company ranking, but are covered in the final outlook (p. 35 onwards). The Baltic countries were the only ones (with exception of Croatia) where the largest companies experienced a decline in turnover in 2015 ranging from -1.5% in Latvia to -3.0% in Estonia resulting from the embargo implemented by Russia.

ONE NEWCOMER IN THE TOP 10

The number one hasn't changed since the first edition of the Coface CEE TOP 500 ranking: Polish oil and gas giant PKN Orlen defends its leading position, but faced some very challenging times. Turnover decreased by -17.3% compared to 2014. It was previously down by -6.2% in 2014 and by -5.2% in 2013.

The shining new star this year is General Electric Hungary which soared in the ranking from 13th place right into the Top 3, where it finished as the new number 2. The company almost quadrupled its revenues following the integration of Alstom's power generation and grid in 2015.

MOL Hungary is the second big loser. Both oil & gas giants in the Top 10 reported huge losses in turnover; in the case of MOL revenues decreased by -13.9%. It therefore moved down from 2nd to 3rd place. Another company from this sector was kicked out of the exclusive Top 10 club: Due to a 20%-decrease in turnover, Polish Grupa Lotos lost its 8th place from 2014 to land in 11th.

For all other Top 10 companies, 2015 was a much better year. Turnover growth even exceeded the average one, with the largest companies' revenues growing by +6.8% compared to +4.3% on average. Czech Skoda fell one position due to the rise of GE Hungary. It is followed by Jeronimo Martins - a Polish retailer that reported another good year with +9.3%-growth. PGNiG, the state-controlled Polish oil and natural gas company, takes position 6. Although Audi Hungary increased revenues by +12.4%, it fell from 6th to 7th place thanks to the rise of GE Hungary. Czech energy group CEZ follows in position 8 (+4.2%) and another company from the automotive sector also did very well in position 9 (up one rank): Volkswagen Slovakia. The Top 10 is completed by the Polish Energy Supplier PGE - also a long-standing company in this group.

ABOUT THE WINNERS AND LOSERS

66 businesses (13%) entered the ranking for the first time or re-entered after at least one year of absence. 218 companies or 44% moved up, 213 (43%) moved down. Only two companies remained in exactly the same position: The number 1, PKN Orlen, and Hungarian Kőzgép Építő-És, a producer of metals, at the lower end in position 444.

Serbian retailer Mercator-S made the biggest jump up the ranking. It improved its position

by 161 places (from 337 in 2014 to 176 in 2015). Mercator-S is the largest retail chain in Serbia since the merger with IDEA, another Serbian retailer, in 2014.

The second biggest jump up the ranking was made by PESA (151 places to 231). The company produces trams and trains in Poland and increased its turnover by an impressive +61.2%. EU funds and international orders pushed orders up to the highest level in the company's history. Unfortunately, PESA also reported a huge loss (-30.6 million EUR) due to contractual penalties for delays in the realization of orders.

Most of the 10 biggest losers come from the energy sector: Lukoil Baltija drops from 267 to 433. Latvian Latvenergo loses 127 places, Croatian HEP 117, OMV Bulgaria 113, Czech Synthos 108, and Hungarian ENI 100 - confirming the rather difficult situation in these industries. The steepest fall of 191 places was seen at Poland's largest distributor of newspapers: Kolporter. Lukoil Baltija comes second in this negative ranking. A 30.7% fall in turnover led to a dramatic drop in the ranking.

TOP COUNTRIES

P for pole position - or Poland

With 427 billion EUR in GDP, Poland is by far the largest economy in the region. Due to its quite big domestic demand, it survived the financial crisis

¹ The study includes the following countries: Bulgaria, Croatia, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Romania, Serbia, Slovakia, Slovenia

relatively well, while other more export oriented countries suffered from economic downturns. The Polish economy has been delivering very solid growth rates of above 3% since 2014. Its export share of only 49.5% in 2015 is relatively low compared to other CEE countries.

The strength of the Polish economy isn't fully reflected in this year's ranking: The total number of Polish companies within the Top 500 decreased to 167 compared to 176 in 2014 and 177 in 2013. The total share of Polish businesses therefore decreased to 33.4% (-2 pts. compared to 2013). The main reason for this is other countries racing to catch-up, having suffered from less favorable economic conditions in the past few years. Taking a closer look at Polish companies: 59% increased their position compared to last year's edition,

either by moving up or entering the ranking. Overall turnover of Polish top companies increased by +2.9% which lies below the 4.2% average for the region. The biggest downturn (-7.7%) was reported by oil & gas giants. Being the biggest group (22% out of 167) and accounting for almost 30% of the Polish turnover generated, the difficult situation of this sector affected Poland's performance as a whole. Nevertheless, it maintained its pole position for another year, but must be aware that other countries are rapidly catching up.

2nd position: Czech Republic

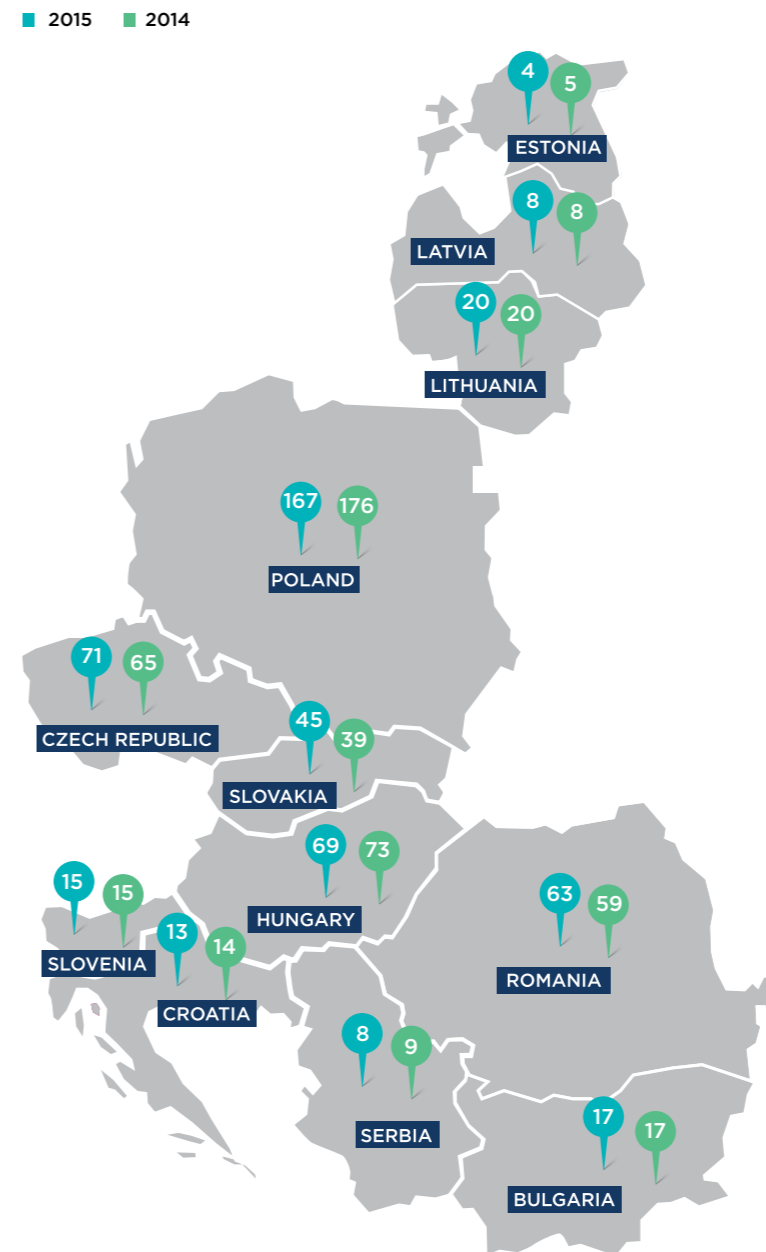

The Czech economy had a fabulous 2015. With a growth rate of 4.5% it beat all other CEE countries in this regard. Public investment boosted the economy together with the efficient

Coface CEE Top 500:
Number of Top 500 companies per country

use of the old EU budget. The Czech Republic has one of the lowest unemployment rates in the entire European Union (5.1%). Rising wages and low inflation supported private consumption as the main driver of growth.

The largest companies in the Czech Republic used this exceptionally good year for further expansion and pushing the country into 2nd place in the ranking. 71 businesses succeeded in getting into the CEE Top 500 (+6) and therefore continued their steady rise to the top. It is the fourth consecutive year of increasing numbers. Almost 70% improved their position which is the second best result of all countries. Total turnover grew by +3.1% and net profits by +16.9% to 4.9 billion EUR.

Hungary - a roaring third position

Last year's number 2 moved down a place, although the performance of the largest companies was again very good. Hungary took a place on the podium for growth among the CEE economies in 2014 (+3.6%), but registered a moderate slowdown in 2015 (+2.9%). Some of the largest companies in Hungary were consequently kicked out by better performing foreign competitors, leaving the country with 69 large players (-4). Nevertheless, the remaining Hungarian giants reported the highest turnover growth (+13.8%) of all countries. Hungary also placed a new company within the Top 10 - GE Hungary - and still comes second in the ranking of countries by turnover (97.2 billion EUR compared to the Czech revenue of 88.1 billion EUR).

The background to this sound third place in the ranking can be found in the solid growth rates since the country's recession in 2012. Besides EU funding, the economy was supported by government policies including monetary easing and increasing public sector employment which led to an all-time low unemployment rate of 6.8%. As in all CEE countries, this resulted in higher private consumption being the main driving force of growth.

EMPLOYMENT

The largest companies in CEE remain very important employers in the region. The CEE Top 500 companies employ 4.3% of the total labor force and were able to increase their employment rate by +0.5% to 2.2 million people.

UNEMPLOYMENT

On the one hand, the booming CEE economy improved the situation on the labor market. On the other hand, better employment supported the economic upswing. Private consumption was and still is a key driver for growth. This is due to a combination of rising wages, low inflation, depressed commodity prices, historically low levels of interest rates and, just as importantly, further falls in unemployment rates.

Unemployment levels decreased in eleven out of 12 countries. The highest decrease was reported by Bulgaria (-2.2 pts.) pushing the unemployment rate below 10% (from 11.4% to 9.2%). While there were only five countries in 2014 with an unemployment rate of less than

10%, eleven countries reached a level below this mark in 2015. The Czech Republic posted the lowest unemployment rate of 5.1% (-1.0 pts.), followed by Estonia on 6.2% (-1.2 pts.), Hungary and Romania (both on 6.8%, -0.9 pts. and 0.0 pts. respectively). The highest unemployment levels again prevailed in two Balkan states: Serbia reported the highest unemployment rate in CEE, falling from 19.2% in 2014 to 17.7% in 2015, but the outlook is positive. The difficult Croatian labor market also showed signs of improvement (-1.0 pts. to 16.3%).

THE TOP 500 AS EMPLOYERS

In line with the economy, top companies further strengthened their position as important employers in the region. Top players hired over

Chart 2:

Coface CEE Top 500:
Change in turnover and employment per sector

Circle size = % of total CEE Top 500 employment (importance as employer)

10,000 people compared to 2014 and increased overall staff to 2.2 million people. This is a further, albeit only slight increase compared to 2014 where employment rose by +3.4%. Seen from a different perspective: 4.3% of the total labor force (43.8 million) in Central and Eastern Europe work for one of this year's top companies compared to only 4.2% in 2014.

than 1%. The largest employers again come from Poland: Poczta Polska was the largest within the Top 500 with a work force of 75,000. Second comes Polish retailer Jeronimo Martins Polska (approx. 55,200) and third the energy company PGE (approx. 38,900).

EMPLOYMENT BY SECTORS

However, this figure decreased for the leading countries of 2015: Both Polish and Hungarian top companies employed fewer people and the Czech Republic showed only a very slight increase (+0.5 pts.), but this was offset by hiring in the other countries. When it comes to the total number of workers compared to national labor force, Lithuania remains on top. Almost 10% of the country's working population has a job at the top players highlighting their importance for the national labor market. Bulgarian top enterprises, however, are less crucial: here the figure is less

The labor intensive non-specialized trade sector is again the biggest employer in CEE. Nearly 562,000 people worked within this sector, which is an impressive increase of +9.7% in comparison to 2014 benefiting from increasing private consumption. The information technology and electronics sector comes second with 360,000 (-0.2%). In third position is automotive & transport with 350,000 people, although if the sector has experienced a significant decrease in the total number of staff by -6.7%.

SECTORS

The key sectors represented by the largest companies in CEE remain the same: Oil & gas giants dominate, although falling energy prices put a lot of pressure on them. Automotive & transport continued its rise and strong private demand pushed the sectors electronics, information & telecommunication and non specialized trade.

THE (UN)DISPUTED NUMBER 1

Companies from the minerals, chemicals, petroleum plastics and pharma sector have traditionally been strongly represented in the Top 500 ranking. In 2015, the total number increased to 111 businesses compared to 105 in 2014. But the fall in energy prices has had a powerful effect on these companies. It is the only sector not to profit from the economic growth in CEE. Overall turnover fell by -8.3% to 150 billion EUR, while other major sectors saw rising figures. This decline was mainly a result of the low oil prices on the global markets in 2015, with crude oil closing at an 11-year low. Most companies therefore moved down the ranks.

NO. 2 - CONTINUING RISE TO THE TOP?

Automotive & transport continues its rise to the top for the third consecutive year. 87 companies (compared to 86) earned 110.3 billion EUR in revenues. This is one of the biggest increases of all sectors at +10.3%. This highly export-driven industry profited from the growth in Eurozone from 0.9% in 2014 to 1.6% in 2015: Sales of new vehicles grew solidly (+10.1% at end-February 2016, year-on-year) and there is still room for more as the number of vehicles sold (12.9 million year-on-year at end-February 2016) is still far lower than the average prior to the 2008 financial crisis (14.4 million). No wonder that almost 70% of the businesses improved their position (incl.

newcomers) in the ranking. Main countries for the automotive industry are the Czech Republic, Hungary, Poland and Slovakia. Although Czech companies account for only about a fifth of all companies, they generated almost a third of the overall sector turnover. The most dynamic growth rate was shown by Hungarian manufacturers with an increase of +13.8%.

consumer confidence indicators. Nonetheless, households were more inclined to purchase durable goods in 2015, rather than focusing on daily necessities.

This development had a very positive effect on revenues for businesses in the electronics, information & telecommunication and non specialized trade sectors. While the total number of the first stayed the same compared to the ranking for 2014, earnings increased by +4.1% to 66.2 billion EUR. Non specialized trade companies had a growth rate of +9.4% to 90.5 billion EUR and increased in total numbers to 71 (+5). Strong competition and low margins are still forcing the industry to carry out strict cost control and find new growth opportunities for expansion.

BENEFITING FROM DOMESTIC DEMAND

Both positions 3 and 4 in the sector ranking profited from the main growth driver in CEE: private consumption. Households benefited from increasing real disposable income and were more willing to spend. This was confirmed by rising

While manufacturers of electronics already benefited in 2014 from the more favourable environment in CEE, 2015 was the first time that Polish telecoms saw growth in revenues in the last couple of years. The Polish telecommunications market is the biggest in CEE and has a total value of 39.5 billion PLN.

Chart 4:
Coface CEE Top 500:
Number of companies per sector

SECTORS IN THE SHADE

Utilities & public services slipped further down the ranking. While the industry was amongst the three largest in CEE in 2013, it was kicked off the podium in 2014 (61 companies). In 2015, only 53 are represented, albeit the earnings of the remaining businesses rose by +4.4%. In terms of turnover, the industry would still be in 4th place with 80.1 billion EUR. It holds some of the largest companies in CEE, which is clearly reflected in the Top 10 with three utility companies represented: Polish PGNiG (6th) and PGE (10th) and Czech CEZ (8th). However, only 5th place is achieved when considering the total numbers of businesses.

With 39 companies (-4) the agriculture, meat, agro food & wines sector belongs to the smaller ones in the region and occupies 6th place, as in 2014. It is dominated by Romanian (7) and Polish players (19). While Lithuanian and some of the Polish businesses felt the impact of the Russian import embargo and the low milk price index (-12%), most other large players reported good growth in revenue.

All the other industries represent only a minor share (14%) of the largest companies in CEE. These are also the ones with the lowest average turnover and therefore only contribute 11.5% of the total Top 500 revenues.

However, some of these industries can look back over a very good year. EU funds supported numerous construction projects in 2015. The long-standing problem industry profited from those investments, allowing the revenues of the largest construction companies to rise by +6.7% following +7.4% in 2014. The outlook is cautious: The construction sector still exhibits weak payment behavior. In many cases, losses suffered during previous very challenging years have not yet been compensated for and the slow start to new EU funding is already negatively affecting the sector.

The three Polish companies in textile, leather & clothing increased their turnover by +14.8%. Both the largest Polish clothing retailer LPP and newcomer H&M Poland (411th place) focused on expansion by opening new stores and e-commerce channels.

Volkswagen Slovakia

Volkswagen Slovakia

9TH PLACE

“ Volkswagen Slovakia continued its successful course in 2015. It was a year marked by the launch of production of the new generation Audi Q7, one of the most advanced SUVs in the world. We have reached record sales levels with turnover of 7.2 billion EUR.

The main reason for the success of our company, which has become a reliable partner to the Volkswagen Group and our customers, are the more than 10,000 committed employees. These were involved in the production of 397,458 cars, 262,400 gearboxes and 36.4 million car components in 2015. At the same time, we have also made significant investments in the company's future. The largest volume of investments in the company's history of 414.6 million EUR represented an annual increase of 78%. A substantial part of the investments was used for the construction of new production facilities. ”

Methodology

The CEE Top 500 is a joint project by the Coface offices in Central Europe. This ranking covers the largest companies in the region – based on the turnover for the 2015 calendar year – and was prepared in 2016 for the eighth time. The study includes the following countries:

Bulgaria • Croatia • Czech Republic • Estonia • Hungary • Latvia • Lithuania • Poland • Romania • Serbia • Slovakia • Slovenia

The largest companies in each of the above countries (turnover ≥ 300 million EUR) were identified, excluding financial service providers such as banks, insurance companies, leasing firms and brokers. In addition to revenues, the CEE Top 500 study includes other key corporate indicators, e.g. net profits, the number of employees and the respective changes in relation to the previous year.

Turnover and profit were converted into EUR based on the exchange rate at the end of 2015. The data were taken from our Coface Infolcon database and supplemented with external information as required.

The ranking does not include companies that refused to provide financial results by the time the CEE Top 500 list was finalised. If figures in turnover or employment for 2015 were not available, 2014 figures were taken as a proxy and clearly marked.

The eighth edition of the CEE Top 500 company ranking differs slightly from previously published versions. Due to the ongoing conflict in Ukraine and resulting difficulties in obtaining reliable company data, we have decided to exclude the country from this year's ranking.

Mantvydas Štareika
Country Manager
Coface Lithuania

“Despite the huge negative impact of external factors on the Lithuanian economy in 2015 (Russia crisis, oil and other commodity prices), the situation in the country remains stable. The recently granted higher Coface country risk assessment of A3 is supported by stable results of companies' turnover together with higher employment and a visible increase in net profit.

Nevertheless, the negative external foreign factors mentioned above together with increasing competition mainly influenced the negative results in the agriculture and food industry (total decline in net profit of -42%). In addition, due to lower oil prices, the revenue of companies in the minerals, chemicals and petroleum sector fell by -15% or almost 1,000 million EUR. This was one of main factors behind the lower positions for Lithuanian companies in the Top-500 CEE list.”

Marco Höbl
Managing Director
Kaufland Romania

“Within the last years, Kaufland Romania's figures have been growing, and in terms of 2015, we can say that it is an extraordinary year, especially due to one of the highlights of the market - the lowering of the VAT. In this time, Kaufland embraced many positive and fresh changes: developing the product range, taking on new opportunities, opening new stores and upgrading existing ones in order to welcoming our customers. We won the Most Trusted Brand (Readers' Digest) title for the fifth consecutive year. Behind the entire success, however, are our people. Kaufland Romania is a strong and a very enthusiastic team. I personally encouraged a type of culture within the company, that places the people in the center, and together we are an extraordinary team. When we talk about management, working environment, but also the everyday life, I think the most important principle is to be open minded and not to forget to be human.”

Jarosław Jaworski
Country Manager
Coface Poland

“Despite difficulties experienced by many global market economies, Poland has resisted recession, witnessing robust economic growth. For the second consecutive year, domestic GDP growth rates above 3% helped entrepreneurs to increase their turnover and profits. Solid foundations and sustained economic growth are secured by a good macroeconomic environment in which to run a business.”

Poland has an exceptionally large number of companies in this year's Top-500 CEE ranking. As many as 167 were listed in 2015. We also lead in the category of Top-10 businesses - we have four companies here, while the leader of the classification - PKN Orlen - has maintained its leading position since the ranking was first published. ”

Eugen Anicesu
Country Manager
Coface Romania

“ The positive trend of the Romanian economy, reflected by the upgrade of the country assessment from B to A4 in 2016, is also evident in a slightly better position of Romanian companies within the Top 500 CEE.

An increasing number of companies put the country in fourth position, as last year. In the next few years, our expectation is to see a better position at the top of the ranking that reflects the size of the economy, which has the 3rd largest GDP in the region. ”

Barbara Goździkowska
General Manager
AVON Cosmetics Polska

AVON
the company for women

314TH PLACE

“ AVON is a global leader in the cosmetics market. We offer our clients the possibility of the most convenient direct purchases and also support the financial independence of our representatives. We understand and meet the aspirations and needs of women who want to be beautiful and independent.

Next year, AVON Cosmetics Poland will celebrate its 25th anniversary. Innovation of our products and recognition within the beauty industry are the key factors for generating a continuous increase in sales. AVON has a stable share in the Polish cosmetics market of 6.7%, putting us in first place among cosmetic brands and fourth place among cosmetics manufacturers in Poland. ”

Edvard Ribaric
Country Manager
Coface Croatia

“After six consecutive years of recession, Croatia finally enjoyed GDP growth of 1.6% in 2015 and the positive trend is expected to continue in 2016 as well. Growth was driven mainly by increased household consumption and capital investments (mostly in the public sector).

Domestic demand is expected to continue to be the major driver of growth, while investments are expected to rise thanks to the increased take-up of EU structural and investment funds. Although exports grew by double figures (11%), mostly driven by European demand, the trade in goods shows a large deficit, mostly offset by the tourism industry.

Despite some encouraging results in 2015, further structural reforms are needed in order for Croatia to enjoy long-term sustainable growth, especially in the context of increased volatility on financial markets and a slowdown in global trade. ”

Coface Austria

“Not only Austrian Banks but foremost Austrian companies have always been strongly linked to the CEE region, either through intense trade relations but also via foreign direct investments.

Therefore, developments in the region, especially pertaining to the largest companies, affect the Austrian economy and need to be observed carefully.”

**ONLINE - IN-DEPTH ECONOMIC RESEARCH
Panorama: a publication known for quality**

Coface places great importance on economic research and has a team of economists tasked with monitoring macro- and microeconomic developments worldwide. Our publications, Panorama, are available online. Their aim is to help businesses assess and prevent risk so that they can make their decisions based on the most relevant, reliable and recent information possible.

Some of our studies focusing on CEE in 2015/2016:

- Insolvencies in Central and Eastern Europe (July 2016)
- Overview of Hungary: Corporates on the starting block for sustainable growth? (May 2016)
- Poland Retail Sector (December 2015)
- Poland – solid economic growth results in a sustainable decrease of company insolvencies (October 2015)

Our publications are free of charge and available on:

WWW.COFACECENTRALEUROPE.COM

ECONOMIC OUTLOOK

BULGARIA

Grzegorz Sielewicz

Chief Economist Central & Eastern Europe

The private sector is focusing on deleveraging, which is leading to a slowdown in investment. Domestic demand will remain the growth driver.

B

Coface Country Risk Assessment June 2016

A4

Coface Business Climate June 2016

Coface 2016 GDP forecast

The Bulgarian economy expanded by 3.0% last year. The pace of growth exceeded expectations as well as results recorded in previous years. The economic activity over the course of 2015 was supported by rising exports and, especially in the second half of the year, domestic demand with growing private consumption and fixed investments. EU funds with their higher than anticipated absorption were beneficial for public investments and enhancing GDP growth. Dynamics of household consumption are supported by a decreasing unemployment rate which dropped below 10% for the first time since 2009.

In such an environment, the domestic demand will be the main growth driver this year with Coface GDP growth forecast at 2.1%. The highest contribution will come from private consumption.

Investments will slow down as the effects of EU funds will be not as supportive as last year and the private sector still focuses on deleveraging.

On the exports side, corporates can benefit from the European Central Bank's moves to make the euro weaker, as the Bulgarian lev is pegged to it. This enhances Bulgarian competitiveness as the list of main export destinations also include non-euro countries; however, there are doubts as to whether these ECB actions will bring the expected results. In terms of both the exports potential and gathering FDIs, Bulgaria enjoys the lowest labor cost levels; however, an unsupportive business environment and limited foreign capital inflows are going to drag on investment growth and further economic expansion.

CROATIA

Croatia has rebounded from a long recession; the key issue, however, will be progress in implementing necessary reforms.

B

Coface Country Risk Assessment June 2016

A3

Coface Business Climate June 2016

Coface 2016 GDP forecast

Economic activity in Croatia has finally returned to positive growth. After six consecutive years of recession, Croatia recorded growth of 1.6% in 2015. It was supported by both external and internal demand. The labor market improved with decreasing unemployment and rising wages, whereas a reduction of personal income tax has provided further support for consumer spending.

On the other hand, the unemployment rate remained high despite its contraction, reaching 16.3% in 2015 and 14.9% in March of this year. Those levels are still the highest in the CEE region as well as one of the highest in the entire European Union just after Greece and Spain. Gross fixed capital formation was supported by a higher absorption of EU funds with investments growing mostly in

the public sector; however, an improvement has also started to be seen within this regard in the private sector.

Coface forecasts that GDP growth will reach 1.9% this year with further improvements of the labor market positively contributing to the economic activity. However, the continued deleveraging process still hampers a decisive recovery of household spending. Similarly to last year, investment will be mostly fueled by the public sector with only minor growth coming from the company side. The still-high debt burden represents a constraint in both the public and private sectors. Although structural improvement is on the agenda, the progress of governmental reforms is not fully certain.

CZECH REPUBLIC

Impressive growth recorded last year was fueled by infrastructural investments, while private consumption also made a sizeable contribution. The unemployment rate will remain one of the lowest in the EU.

A3

Coface Country Risk Assessment June 2016

A2

Coface Business Climate June 2016

Coface 2016 GDP forecast

Last year, the Czech economy recorded an impressive growth rate of 4.5% beating other CEE countries in this regard. Such a good result is attributable to an exceptional boost from public investment. The year 2015 was the last one of using the previous EU budget and the Czech Republic was successful in tapping funds and engaging them within the EU co-financed investment activity. Inventories also expanded whereas the purchase of military aircraft enhanced further GDP growth. As a result, it will not be possible to keep the Czech economy on such a robust growth rate this year as well. Our forecast assumes lower but still fair growth of 2.4%.

Similar to last year, the economic activity in 2016 will be driven by private consumption. The Czech

Republic has a low unemployment rate which reached 5.1% in 2015, i.e. one of the lowest rates in the entire European Union. The further support for private consumption comes from growing wages and low inflation.

In contrast to growing private consumption, the gross fixed capital formation is expected to decrease slightly after the strong rally it experienced last year. On the other hand, the component private sector investments is likely to record an increase thanks to good prospects of demand and therefore increasing capacities by companies. After years of fiscal consolidation, the relaxation started in 2014 and government investment and consumption spending speeded up, supporting the economic activity last year.

ESTONIA

2015 growth was the weakest in the last six years due to a slump in Russian demand and stagnation of the Finnish economy. A modest upturn in economic activity is expected this year.

A3

Coface Country Risk Assessment June 2016

A2

Coface Business Climate June 2016

Coface 2016 GDP forecast

Last year Estonia generated the slowest growth rate among the Baltic economies. Its 2015 growth reached 1.1%; however, it is expected that the economic activity will gradually increase reaching 1.8% this year and climbing to 2.7% in 2017. Admittedly, Estonia benefits from a more diversified exports structure compared to other Baltic peers; however, a higher exposure to Nordic countries than in the other CEE economies came with a slower pace of growth of those trading partners. Despite the diversification of trading markets, Russia remains the significant destination of Estonian exports. Moreover, Estonia directly suffered from low oil prices, making its shale oil production inefficient. Whereas exports to the EU markets delivered positive dynamics, the household consumption was the strongest driver of growth. Consumer spending is supported by

developments on the labor market. It benefits from the growth of both minimum and real wages as well as a falling unemployment rate.

However, the unemployment situation probably will not improve as it has recently. Already in March of this year, the unemployment rate of 6.8% was higher than at the same time last year, whereas the unemployment rate fell during the same period for most of the other countries in the region. The performance of the labor market will be affected by the decrease in the working-age population and the working ability reform which will entice pensioners to come back to the market. It is likely that the unemployment rate will increase in coming years while still staying safely below a two-digit level.

HUNGARY

The government intends to stimulate economic activity and provide various measures to support SME lending, especially in a period of a temporary decline in EU transfers. Despite that, growth will be lower this year.

A4

Coface Country Risk Assessment June 2016

A2

Coface Business Climate June 2016

Coface 2016 GDP forecast

The Hungarian economy has been recording solid growth rates since its recession in 2012. EU funding has been an important contributor to growth, but is by no means the only factor. The country's high pace of growth has been supported by government policies including monetary easing, more unconventional measures aimed at boosting SME lending and increasing public sector employment.

The perspectives for the Hungarian economy and most of the country's main trading partners have been improving. Households have seen a growth in demand for labor from both the public and private sectors. They have also benefitted from the conversion of their foreign currency mortgage loans into domestic currency. Although the growth of 2.0% forecast for this year by Coface

will be slower than the 2.9% achieved in 2015, this will mainly be due to the decrease in absorption of EU funds, which should speed up, beginning next year.

Nevertheless, ongoing improvements in the labor market and fiscal measures (such as cuts in personal taxes and VAT rates), are supporting private consumption as the main driving force behind the economy.

The unemployment rate reached an all-time low of 6.8% in 2015 and it has decreased further to 5.6% in March of this year. Moreover, the employment is likely to grow further thanks to hiring employees by the private sector and the governmental program of public works.

LATVIA

The Latvian economy is benefiting from positive developments on the labor market. Household consumption will continue to lend support this year.

A4

Coface Country Risk Assessment June 2016

A3

Coface Business Climate June 2016

Coface 2016 GDP forecast

Latvia is expected to achieve a slower pace of growth than last year. Nevertheless, the rate of 2.3% in 2016 will be a relatively good result facing deteriorated economic conditions in Russia and other CIS countries with which Latvia has had intense trading relations. The Latvian economy is also expected to benefit from rising domestic demand. The improvement of the labor market is supported by growing wages with the increase of the minimum wage both in 2015 and 2016. The unemployment rate finally returned to single digits last year for the first time since 2008 and its decrease has continued in recent months. Although there is still some room for a more gradual reduction of employment and the government is trying to diminish structural shortages through its policies, the further contraction of unemployment will still be subject to structural constraints.

Companies experience various business conditions depending on the sector of their activities. In the steel industry, Latvia's largest steel producer Liepajas metalurģs resumed production in 2015 after it was declared insolvent in 2013; however, the business is still suffering from low global prices due to the Chinese supply which is affecting the world market. The European Commission's anti-dumping regulations bring some relief but the situation in the sector remains challenging worldwide. As was previously the case, the construction sector still faces difficulties whereas a deterioration of Russian demand and protectionist measures introduced by some European countries negatively affect the transport sector.

LITHUANIA

The reorientation of exports from an easterly to a westerly direction has offset some of the slump in Russian demand. Domestic demand will sustain growth at solid levels.

A3

Coface Country Risk Assessment June 2016

A2

Coface Business Climate June 2016

Coface 2016 GDP forecast

Facing a contraction of Russian demand, Lithuania (as well as other Baltic countries) have shifted their exports more to other markets; however, a significant compensation comes from an improvement on domestic markets. The decreasing trend of the unemployment rate has continued whereas wages are growing. Businesses are experiencing further pressure for an increase of salaries due a rising shortage of employees.

The households' confidence is improving and further benefits have come from increasing the minimum wage twice this year (January and July). There are positive dynamics of new private sector lending and, in terms of real estate loans, the Lithuanian Central Bank introduced changes reducing the risk of high household

indebtedness with shorter maturities and more restrictive calculating of the financial burden. The year 2015 was challenging for the construction sector. Added value decreased gradually over the course of last year and reached low but positive dynamics in the first quarter of 2016. A rising number of building permits and higher demand for construction work indicates that this year should bring some improvement in the sector.

Lithuanian growth is expected to reach 2.8% this year according to our forecast, which will be almost doubled after a slump of exports to Russia which had an effect on the overall economic activity with growth of 1.6% last year. Private consumption will remain the main driving force supported by strong wage growth.

POLAND

Rising household consumption is supported by unemployment having reached its lowest level in 25 years. The business side is benefiting from higher demand, although some sectors are subject to new taxes implemented by the government.

A3

Coface Country Risk Assessment June 2016

A2

Coface Business Climate June 2016

Coface 2016 GDP forecast

Since 2014 the Polish economy has been delivering solid growth rates exceeding 3%. This path will be continued and GDP growth will reach 3.4% according to the Coface forecast, slightly below the 3.6% recorded last year. The engine of Polish growth remained domestic demand thanks to both strong private consumption and increasing fixed assets investments.

Households have been benefiting from a good situation on the labor market. Whereas the unemployment rate was 10.3% in 2013, it dropped to 7.5% in 2015 and decreased further this year to reach 6.3% in April 2016. The good situation on the labor market is anticipated to be continued. Household consumption will be boosted by introducing a new child allowance which should

have effects on retail sales especially in the third as well as fourth quarter of this year.

Poland has recently suffered from a deteriorated sentiment seen through e.g. a depreciating currency or higher spreads on government bonds. Investors became more cautious when there was a change in the Polish political scene after the elections. In order to fulfill election promises, the government introduced a burden on the financial sector's largest firms (including banks) which, however, has not hampered the supply of loans thus far. Another burden which aims also to increase the competitiveness of small and medium enterprises relates to introducing a tax on the retail sector. Its final shape is being discussed and it is likely to be introduced shortly.

ROMANIA

Romania is enjoying high growth rates thanks to a fiscal stimulus. In the coming years, this effect will gradually fade out.

A4

Coface Country Risk Assessment June 2016

A4

Coface Business Climate June 2016

Coface 2016 GDP forecast

Economic growth in Romania reached 3.8% last year. The highest contribution came from private consumption thanks to a fiscal stimulus. On June 1, 2015, the value-added tax rate for food products was decreased from 24% to 9%. The next cut of VAT rates was introduced this year and related to lowering the VAT rate on non-food products (a decrease from 24% to 20%). Further changes are a part of a new fiscal code. They include scrapping the tax on dividends and increasing the competitiveness of enterprises via lower wage costs and taxes on active micro-enterprises, as well as cuts in excise duties on fuel and alcohol. Moreover, the minimum wage was increased by 19% since May 2016. All of those changes will support growth this year which is expected to reach 4.2% according to Coface forecast.

The structure of growth last year also indicates a nearly 9% increase of investments which, similar to other countries, made use of the opportunity of EU funding in the last moment of the validity of its previous budget. The negative contribution to growth came from net exports which were the result of strong imports thanks to an increase in domestic demand. The reduction of VAT rates results in a decrease of inflation which reached a historical low in May 2016 (-3.5% y/y). It should increase to a positive value in the second half of this year supported by growing private consumption, faster wage growth and increasing the minimum wage.

RUSSIA

Slow and sluggish economic activity: a high level of inflation and the depreciation of the ruble hampered the main activity driver - private consumption.

C

Coface Country Risk Assessment June 2016

C

Coface Business Climate June 2016

Coface 2016 GDP forecast

The recession in Russia is expected to continue but will be less severe in 2016. Growth was -3.7% last year and will reach -1.5% this year according to the Coface forecast. The high level of inflation and depreciation of the ruble hampered private consumption, which is the main activity driver and has fueled growth substantially in previous years. Although oil prices rebounded to some extent, they remain low. This is exerting an effect on the Russian economy due to strong commodity production. Hydrocarbons account for around 2/3 of total Russian exports and despite attempts to rebalance the economy, this cannot be achieved overnight. Investments are expected to remain limited as business confidence indicators remain weak, interest rates are high and further restrictions feed through from Western sanctions on foreign financing. In the meantime, imported goods are subject to a

ban on selected merchandise implemented by Russia. The depreciation of the ruble and the substitution of imports have helped some sectors to record growth, including agriculture, metals and chemicals. These factors also supported export dynamics, which increased last year after a slight contraction in 2014. A slump in real wages and high inflation (although milder than last year) will continue to constrain household consumption. A gradual but slow increase in disposable income should make a minor contribution to the growth of this component next year. Faced with recession and higher defense expenditure, budget spending has increased, although the state held comfortable reserves in both the Reserve Fund and the National Wealth Fund, which together exceeded 120 billion USD (11.2% of GDP) at the beginning of 2016.

SERBIA

Although Serbia has rebounded from recession, the weak labor market is hampering private consumption making a stronger contribution to economic activity.

C

Coface Country Risk Assessment June 2016

C

Coface Business Climate June 2016

Coface 2016 GDP forecast

Last year the Serbian economy recorded a weak growth rate of 0.7% which, however, was an improvement after the recession experienced in 2014 with a growth rate of -1.8%. Unlike most of the other CEE economies, Serbia did not benefit from private consumption as the main growth driver. Household consumption decreased for a fourth year in a row caused by the weak labor market. A decline in real wages of 2.5% y/y last year with the restructuring of state-owned enterprises will still result in redundancies. The unemployment rate remains high at 17% although it has declined in recent years. Some revival of household consumption is likely to take place which is already signaled by the retail trade and wage data in first months of 2016. Last year, investments benefited from significant monetary easing and the improving business environment.

The recovery of trading partners supported growth of exports which are mostly shipped to Italy, Germany, Bosnia and Herzegovina, Russia and Romania. Total exports should support the Serbian economic activity this year as well with benefits of demand coming from EU markets. The accession to the European Union remain the priority and one of the main goals of the government.

GDP growth will speed up to 2.0% this year and 2.5% in 2017 according to the Coface forecast, however, the situation of public finances will remain challenging with the general government deficit being slightly below 3% of GDP in the best case and gradually increasing public debt coming closer to 80% of GDP.

SLOVAKIA

The automotive sector remains a crucial contributor to growth. Further planned investments will benefit Slovakia, but also make the country more dependent on car sales, especially in terms of foreign demand.

A3

Coface Country Risk Assessment June 2016

A2

Coface Business Climate June 2016

Coface 2016 GDP forecast

In 2015 the Slovak economy expanded by 3.6%, which was the strongest result in last four years. The main contribution came from gross fixed capital formation thanks to a higher usage of EU funds at the end of the drawing period of the previous EU budget. Another component of domestic demand, private consumption, also made a solid input to the economic activity benefiting from improving labor market, wage growth and negative inflation. In terms of the unemployment rate, Slovakia has been on the improvement track with the rate falling to 11.5% last year after reaching 14.2% in 2013. Further growth of wages will support the households' purchasing power.

The automotive sector remains an important part of the economy. Slovakia is the largest car

producer per inhabitant in the world with 184 cars manufactured per 1000 inhabitants. Good perspectives for the sector contributed to pronounced results in the industrial production last year. The next car producer Jaguar Land Rover announced an investment worth more than 1 billion EUR with construction starting in 2016 and production scheduled to take off in late 2018. Growth in 2016 will be driven by household consumption benefiting from a good situation on the labor market with increasing employment and rising wages. Private investments will not contribute to growth as much as they did last year; however, the increase should be noted here not only thanks to Jaguar Land Rover's investment. The ECB accommodative monetary policy will bring support for fixed investments of businesses.

SLOVENIA

Strong exports and recovering domestic demand contributed to solid growth last year. Like most of the other CEE economies, Slovenia will experience lower EU co-financed investments this year.

A3

Coface Country Risk Assessment June 2016

A2

Coface Business Climate June 2016

Coface 2016 GDP forecast

After two years of recession in 2012 and 2013, Slovenia already recorded solid growth of 3.0% in 2014 and the pace decreased only slightly to 2.9% last year. Strong exports and recovering domestic demand fueled the economic expansion in 2015. As in other CEE economies, there was a positive stimulus coming from EU funds at the end of drawdown period and public investments rose slightly whereas a strong rebound of private investments is still constrained by the continued deleveraging. The industrial production recorded the highest growth rate in last five years, being mostly supported by growth in the manufacturing of cars and other transport equipment.

Private consumption strengthened its contribution to GDP growth thanks to an improving labor market. Nevertheless, wage growth was moderate and the average unemployment rate of 9.0% in 2015 was just slightly better than levels recorded in 2013 and 2014 and still higher than rate experienced in previous years until 2012. This year, the private sector is likely to increase employment, especially among manufacturers, and further contraction of unemployment is already seen in hard data. The unemployment rate dropped to 7.8% in April 2016. Household consumption will be the main growth driver this and next year and the contribution of exports will be still significant but will decrease, impacted mostly by higher imports.

UKRAINE

Weak economic activity and war-related destruction resulted in the ongoing recession. The economy should bottom out slowly and gradually start recovering next year.

D

Coface Country Risk Assessment June 2016

D

Coface Business Climate June 2016

Coface 2016 GDP forecast

The weak performance of the Ukrainian economy reached a bottom last year with GDP growth contracting by 9.9%. Since then, a slow improvement is anticipated but recession will be still recorded this year (the forecast of GDP growth of -3.0%) and a positive growth rate of 1.5% in 2017. Although the latter figure will not be impressive, if it materializes it would be the highest growth rate since 2012.

The Ukrainian economy has been suffering from war-related destruction which results in the loss of the production and export capacities located in the two separatist provinces in the east (Donetsk and Luhansk) where a large percentage of the country's steel production facilities and coal mines are concentrated. Moreover, the poor economic activity was mostly caused by a

negative contribution of household consumption. The high inflation (almost 50%) and large hryvnia depreciation resulted in a contraction of households' purchasing power. Public sector wages and pension which were frozen last year are to be indexed by a total of 12.5%; however, it will not result in a boost for private consumption, especially since the Coface forecast assumes an inflation rate of 20% this year.

Exports decreased last year and dynamics were still negative in the first months of this year. Although the currency depreciated, Ukraine cannot benefit much from increased competitiveness as prices of leading export products (steel, coal, agricultural raw materials) are fixed on a global or regional level.

AN OUTSTANDING NETWORK

SERVICING BUSINESSES IN CEE

COFACE GROUP - FOR SAFER TRADE

Starting in the 1990s, Coface has gradually established a first rate international network, taking over credit insurance companies and opening numerous subsidiaries and branches. We have also built a widespread network of partners. Every link in this chain represents another Coface entity, meaning we now operate directly or indirectly in 100 different countries, accounting for nearly 97% of global GDP. Thanks to this international presence, Coface is able to remain close to its customers, there to mediate risk directly in the countries in which they operate and to initiate debt recovery procedures within the country of non-payment itself.

COFACE - A PIONEER IN CEE

Coface covers seven regions worldwide. With its 14 branches, Coface employs around 700 people in the region to cover the increasing demand of these fast growing markets.

The mix of local management and market knowledge and the network of expertise in risk management are unique in Central Europe. This allows a broad-based offering covering credit insurance, business information and collection services that makes Coface the risk management partner with the most extensive know-how of the region.

OUR OFFER

CREDIT INSURANCE: TO CONTROL YOUR RISK

Credit insurance, Coface's core business line and long-standing area of expertise, is about in compensating a debt owed to a company after the debtor has defaulted. Alongside effective prevention methods for anticipating and assessing risk, it is one of the key factors in any company's growth, allowing businesses to better manage their trade receivables.

BUSINESS INFORMATION: TO TAKE ACCEPTABLE RISKS

Our teams are on hand to advise our customers in all their commercial activities and to help them successfully fulfil the contracts they have with their own clients. We provide data for assessing the creditworthiness of prospects and buyers, as well as macro- and microeconomic studies to help customers understand the environment in which they operate.

DEBT COLLECTION: TO LIMIT YOUR LOSSES

Debt collection is an essential facet of the risk management that Coface offers its clients. This activity requires a high level of legal expertise and a global talent network, both of which Coface has through its own resources as well as those of its "Coface Partner" network.

Our clients have access to our debt collection services for both their insured and uninsured invoices.
